SUMMARY

I am a recent Computer Science graduate with hands-on experience in Flutter mobile development, AI automation, and full-stack application architecture. My expertise includes building production-ready applications, integrating AI-powered workflows, and solving complex technical challenges such as multi-user OAuth implementation. I have a proven track record in both nonprofit and commercial projects, and I am seeking opportunities to leverage my frontend and AI automation skills in dynamic, innovative environments.

EXPERIENCE

AI Automation Engineer
Clikview   Live Demo: ClikviewGpt
📅 2024-04-01 - 2025-09-30   📍 Dubai, UAE (Remote)

Designed and implemented AI-powered automation workflows using n8n with 1+ year of platform expertise. Architected and deployed RAG (Retrieval-Augmented Generation) system for intelligent document processing. Developed automation solutions for Google Drive and Dropbox. Managed end-to-end self-hosting of n8n on cloud servers.

Frontend Developer
Charity Mobile App (Nonprofit Project)
📅 2024-11-01 - 2025-08-31   📍 Damascus, Syria

Implemented services section for managing aid requests, built education management system, used flutter_bloc and get_it for state management, firebase_messaging for push notifications, automated API integration using w_builder CLI.

Frontend Developer
Homy Kitchen Mobile App
📅 2024-06-01 - 2024-09-30   📍 Damascus, Syria

Developed social media features (likes, comments, reels), created visual content for homemade dishes.

Frontend Developer
EduCloud Mobile App
📅 2023-05-01 - 2023-08-31   📍 Damascus, Syria

Developed school management app, implemented real-time map for bus tracking, integrated notification system using Pusher.

Frontend Developer
Blimp Simulation Web Application
📅 2023-08-01 - 2023-09-30   📍 Damascus, Syria

Developed immersive web-based 3D blimp simulation using Three.js and JavaScript, designed realistic 3D environments.

SKILLS

Flutter   React   Three.js
JavaScript   HTML   CSS
Python   FastAPI
MongoDB   n8n
AI Automation
RAG Systems
Google Gemini AI
OAuth 2.0   Fireflies API
Bloc   Firebase
w_builder CLI   Pusher
Google Maps
Server Management
3D Development   Git
Google Cloud APIs

EDUCATION

Bachelor of Science in Information Technology Engineering
Graduated September 2025
Damascus University
📅 2020-10-01 - 2025-09-30

CERTIFICATIONS

Generative AI Mastermind
International

Understanding Computer Vision Workshop

LANGUAGES

English   Advanced (B2)

PROJECTS

NeverMiss AI - AI-Powered Productivity Platform | NeverMissAI
Productivity

Duration: 2 week(s)   **Role:** Independent Developer

Technologies: React, Python, FastAPI, MongoDB, N8N, Google Gemini AI, OAuth 2.0, Fireflies API

Architected and deployed full-stack AI productivity assistant enabling email, calendar and task management through conversational AI and voice commands.

Integrated Google Workspace APIs, implemented secure OAuth 2.0, designed stateless workflow architecture for multi-user support, developed bidirectional voice interaction, integrated Fireflies API for meeting transcription, built React frontend and FastAPI backend.

....

Charity Mobile App
Duration: 10 month(s)   **Role:** Frontend Developer
Technologies: Flutter, Bloc, Firebase, w_builder CLI

Implemented services section for managing aid requests, built education management system, used flutter_bloc and get_it for state management, firebase_messaging for push notifications, automated API integration using w_builder CLI.

....

Homy Kitchen Mobile App
FoodTech

Duration: 4 month(s)   **Role:** Frontend Developer
Technologies: Flutter, Social Media Integration

Developed social media features (likes, comments, reels), created visual content for homemade dishes.

....

EduCloud Mobile App
Education

Duration: 4 month(s)   **Role:** Frontend Developer
Technologies: Flutter, Pusher, Google Maps

Developed school management app, implemented real-time map for bus tracking, integrated notification system using Pusher.

....

Blimp Simulation Web Application
Simulation

Duration: 2 month(s)   **Role:** Frontend Developer
Technologies: Three.js, JavaScript, 3D Development

Developed immersive web-based 3D blimp simulation using Three.js and JavaScript, designed realistic 3D environments.
